Global Broadband Internet **access**

FAST | RELIABLE | COST-EFFECTIVE

POWERED BY **iDIRECT**™

Fast, reliable connections anywhere in the world

It doesn't matter where you are. You can have a broadband IP connection that's fast, reliable and affordable — whether you operate out of a single office in a small town or you're a Fortune 500 company with offices around the world.

iDirect's NetModem II Broadband Router is the first and only product designed from the ground up to deliver IP communications via satellite — quickly, easily and cost-effectively. Our end-to-end technology gives you bi-directional broadband connections that grow with your company.

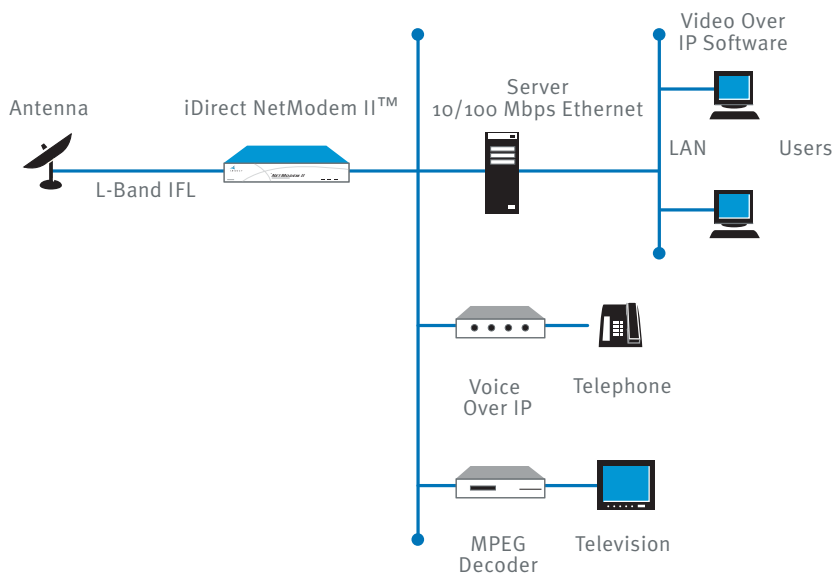

iDirect provided reliable, **high-speed access** not otherwise available in our area — well **within our budget.**

SUPERIOR TECHNOLOGY. SCALEABLE SOLUTIONS.

The iDirect NetModem II Broadband Router is a compact, self-contained terminal that integrates all of your required hardware and software. It offers the highest bi-directional data rates available in the industry today — up to 11.2 Mbps downstream and 5.75 Mbps upstream. Adding locations, increasing capacity and customizing your configuration can be accomplished with a simple phone call.

Plus, our network operations centers are directly linked to the Internet backbone, so there are no additional ISP charges, multiple router hops or problems with public network congestion.

SAMPLE REMOTE SITE CONFIGURATION

iDirect service is easily installed. A small VSAT dish is mounted on the roof of your facility and connected by coaxial cable to an iDirect NetModem II that is integrated with your LAN through a standard Ethernet port.

iDirect DELIVERS

Ultimate flexibility ...

- ◆ Ubiquitous coverage
- ◆ Remotely configured service levels
- ◆ Immediate availability

Unconditional reliability, and ...

- ◆ 99.9% network availability
- ◆ Advanced forward error correction that improves quality, data throughput and bandwidth utilization
- ◆ Around-the-clock customer support

Maximum performance ...

- ◆ Highest bi-directional data rates available
- ◆ Mitigated latency through proprietary TCP acceleration
- ◆ Direct connection to the Internet backbone

... at a very affordable cost.

- ◆ Increased bandwidth utilization and dynamic allocation lower service costs
- ◆ Coding gains reduce equipment costs while significantly improving satellite efficiency
- ◆ All-inclusive price — no additional equipment required

One Box, multiple Applications

CONFIGURABLE SERVICE LEVELS ARE AVAILABLE TO SUPPORT A VARIETY OF APPLICATIONS.

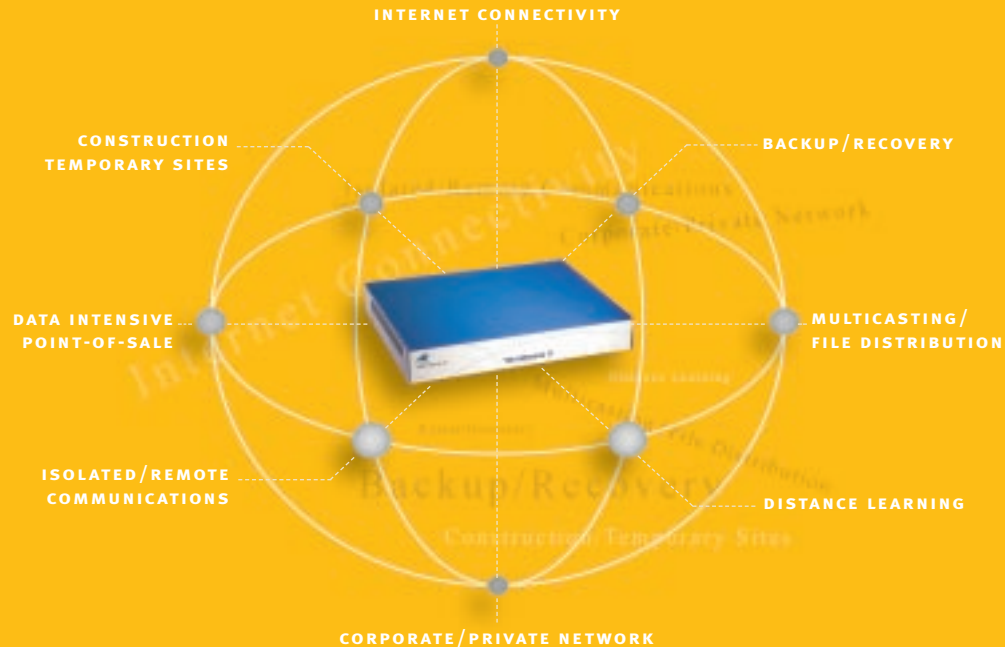

GET UP AND RUNNING FAST

With iDirect, you can be up and running in less than four hours. Everything you need is included — the broadband router, satellite modem, antenna, block-up converter and cabling. All you need to provide is electricity for the indoor unit and roof-top access for the antenna. The solution is so advanced, you don't even need an exterior electrical power supply. And, once activated, the network is proactively monitored around the clock to ensure rapid fault resolution and maximum uptime.

WE MAKE IT SIMPLE

With iDirect, you can:

- ◆ Use high-speed Internet as a competitive advantage in today's global economy
- ◆ Consolidate all LAN-to-LAN connectivity and Internet access
- ◆ Integrate global operations, automate supply chains and improve overall efficiencies, while reducing costs
- ◆ Realize significant reductions in capital expenditures and eliminate local access charges
- ◆ Aggregate your entire organization's bandwidth requirements and distribute them on an as-needed basis for improved network performance and bandwidth utilization

I never knew **satellite** could be so **reliable**, cost-effective and easy to use!
